FIBERFORM™

1 cc, 5 cc & 10 cc MOLDABLE DEMINERALIZED BONE FIBERS

TheraFuze DBF®

Moldable Demineralized Bone Fiber Matrix.

10 cc
ORDER: TC-FF-10

5 cc
ORDER: TC-FF-05

1 cc
ORDER: TC-FF-01

What is it?	A moldable demineralized bone fiber (DBF) form designed for orthopedic and spine surgery.
What is it made of?	Demineralized bone fibers. 100% cortical bone, with no excipients. Produced in compliance with HCT/P regulations under Title 21 Code of Federal Regulations (CFR), Part 1271.
How can it be used?	Can be rehydrated with saline, blood or bone marrow aspirate. Autograft can be easily incorporated and when combined with autograft the DBF matrix helps avoid migration of the combination.
How does it work?	The hydrated FiberForm™ is a conformable excipient-free matrix that can be placed into bone defect sites where new bone formation is required. Osteoconductive with osteoinductive potential to stimulate long term bone formation.
What sizes are available?	1 cc 5 cc 10 cc
Patents	The implants and/or techniques associated with this product may be covered by one or more of the United States Patents: US 9,572,912 US 9,486,557 AUS 2014253753 Other patents pending
